Satellogic Announces that SynMax will be the Exclusive Maritime Intelligence Channel for Data from the New Merlin Constellation

September 3, 2026

SynMax's Theia Platform Becomes the Exclusive Channel for Maritime Intelligence Built on Satellogic's Merlin Constellation

Pairs Daily, One-Meter Class Earth Observation with Dark-Vessel Detection and Maritime Domain Awareness for Government and Commercial Customers

NEW YORK, Sept. 03, 2026 (GLOBE NEWSWIRE) -- Satellogic Inc. (NASDAQ: SATL), the infrastructure company for Persistent Global Intelligence (PGI), and SynMax, a multi-intelligence applied-AI analytics company, today announced that all maritime intelligence derived from Satellogic's Merlin constellation will be delivered exclusively through SynMax's Theia platform.

Under the agreement, SynMax becomes Satellogic's exclusive channel for Merlin-powered maritime intelligence, from vessel detection and tracking to dark-vessel identification, sanctions-evasion monitoring, and illegal, unreported, and unregulated (IUU) fishing analysis. Merlin is designed to remap the entire planet daily with one-meter class resolution and co-collected Automatic Identification System (AIS) information beginning with its first launch in October 2026, giving SynMax's customers a persistent, AI-native imagery source for maritime domain awareness at a frequency, resolution, and latency not previously available to the market.

"Persistent Global Intelligence means turning daily global coverage into decision-ready answers," said Emiliano Kargieman, CEO and Co-Founder of Satellogic. "SynMax is the leader in maritime vessel monitoring, dark-fleet detection, and sanctioned-trade analysis so the Theia platform was the natural choice to deliver Merlin maritime data and a superior solution for customers looking to solve today's maritime challenges."

SynMax already applies its Theia platform to dark-vessel detection, sanctions monitoring, and IUU-fishing analysis for government and commercial customers. Under the new agreement, that analysis will run on Merlin's daily global coverage, giving SynMax a dedicated, high-frequency imagery pipeline purpose-built to support maritime intelligence at scale, rather than working from imagery tasked and shared across multiple partners and use cases.

"Our adversaries hide at sea and bet that no one is watching the right patch of ocean at the right time," said Eric Anderson, CEO of SynMax. "SynMax Theia takes that bet away. It finds the vessels that don't want to be found, and with Satellogic's Merlin constellation behind it, it now does so at a resolution and latency that the maritime mission has never had. This partnership gives our government customers the initiative and ability to act on a threat as it develops instead of reading about it after it is gone."

About SynMax

SynMax is a multi-intelligence applied-AI analytics company that fuses satellite imagery, alternative data, applied AI, and subject matter expertise into decision-ready intelligence for defense, energy, commodity-trading, and intelligence customers worldwide. SynMax delivers the full data stack of broad-area satellite collection, machine learning models, agentic AI workflows, and expert analysts working in concert to turn observation into answers. The result is intelligence customers can act on, not raw data they are left to interpret on their own.

SynMax is used by the U.S. government and allied defense agencies for vessel monitoring, dark-fleet detection, and sanctioned-trade analysis as well as energy intelligence spanning oil and gas production, energy project construction and infrastructure monitoring, and commodity flows. Headquartered in Houston with offices in London and Washington, D.C. Learn more at synmax.com.

About Satellogic

Founded in 2010, Satellogic (NASDAQ: SATL) builds the infrastructure for Persistent Global Intelligence (PGI): continuous, proactive awareness of the places, assets, and activities that matter. The company combines high-cadence satellite collection, best-in-class technology, AI-accelerated workflows, and sovereign-trusted architecture to help customers move from episodic imagery to persistent monitoring programs.

Satellogic serves allied defense and intelligence agencies, civil governments, and commercial markets that need reliable, scalable awareness of change across large portfolios of sites. Customers can begin with discovery, expand into persistent monitoring, and build toward dedicated or sovereign-controlled capacity as their mission requirements grow. Forward-Looking Statements

This press release contains "forward-looking statements" within the meaning of the U.S. federal securities laws. The words "anticipate", "believe", "continue", "could", "estimate", "expect", "intends", "may", "might", "plan", "possible", "potential", "predict", "project", "should", "would" and similar expressions may identify forward-looking statements, but the absence of these words does not mean that a statement is not forward-looking. These forward-looking statements are based on Satellogic's current expectations and beliefs concerning, among other things, our plans, strategies, prospects, both business and financial. Although we believe our plans, intentions and expectations reflected in or suggested by these forward-looking statements are reasonable, we cannot give any assurance that we either will achieve or realize these plans, intentions or expectations. Forward-looking statements are inherently subject to risks, uncertainties and assumptions. Generally, statements that are not historical facts, including statements concerning possible or assumed future actions, business strategies, events or results of operations, are forward-looking statements. Many actual events and circumstances are beyond the control of the Company. Many factors could cause actual future results to differ materially from the forward-looking statements in this press release, including but not limited to the risks and uncertainties described in the "Risk Factors" section of Satellogic's Annual Report on Form 10-K and other documents filed or to be filed by Satellogic from time to time with the Securities and Exchange Commission. These filings identify and address other important risks and uncertainties that could cause actual events and results to differ materially from those contained in the forward-looking statements. Forward-looking statements speak only as of the date they are made. Readers are cautioned not to put undue reliance on forward-looking statements, and Satellogic assumes no obligation and does not intend to update or revise these forward-looking statements, whether as a result of new information, future events, or otherwise. Satellogic can give no assurance that it will achieve its expectations.
