Satellogic to Launch Two ISL-Equipped Satellites and Sovereign Mark V in October

September 14, 2026

New Satellites Extend Inter-Satellite Link Architecture Across Satellogic's Fleet and Add Capacity to the Company's Sovereign Space Systems Program

PARIS, Sept. 14, 2026 (GLOBE NEWSWIRE) -- Satellogic Inc. (NASDAQ: SATL), the infrastructure company for Persistent Global Intelligence (PGI), today announced that two new NewSat Mark VI satellites equipped with inter-satellite link (ISL) technology and one additional NewSat Mark V satellite will launch in October 2026.

The two Mark VI satellites extend Satellogic's ISL architecture across a growing share of its fleet, allowing satellites to share information directly with one another in orbit. A detected change or object of interest on one satellite can inform the tasking of another without every decision passing through the ground first, shortening the data-to-decision timeline and ensuring the constellation operates as a connected, coordinated system.

The Mark V satellite adds capacity to Satellogic's sovereign Space Systems program, which gives allied governments a pathway from commercial access to dedicated, sovereign-controlled capability. The launch builds on a body of proof points that includes Portugal's purchase of a sovereign satellite, the company's execution of the first commercial in-orbit transfer of a satellite, Tata's operation of dedicated capacity for India, and HEO Australia's first-of-its-kind sovereign capability.

"Launching these additional satellites builds out our Persistent Global Intelligence infrastructure with inter-satellite links that increasingly allow our satellites to work together as one coordinated system," said Emiliano Kargieman, Chief Executive Officer of Satellogic. "The Mark V launch is a direct response to the growing demand we're seeing from governments who want to own their intelligence capability. Our PGI infrastructure stack is optimized around the knowledge that mission assurance comes from compressing the time between something changing on the ground and the right decision-maker knowing about it."

These new satellites reinforce how the company's architecture is designed to operate as a coordinated stack. ISL-equipped Mark VI satellites carry detection into action faster, by allowing the constellation to communicate and retask itself in orbit. The Mark V satellite ensures that the same architecture is available to sovereign customers who need dedicated, controlled capacity rather than shared commercial access.

"With ISL, a detection on one satellite can inform the tasking of another without requiring every decision to pass through the ground first," said Alan Kharsansky, Chief Technology Officer of Satellogic. "That's the shift from operating independent satellites to running a connected network, one where the constellation itself prioritizes what matters and directs higher-resolution assets where they're needed."

This is one of a few releases Satellogic is putting out this week at World Space Business Week. The company also confirmed an expanded Slingshot III agreement with Innovative Defense Technologies and the U.S. Office of Naval Research and an update on the rendezvous and proximity operations (RPO) mission with HEO, in which Continuum-1, a Satellogic-built satellite never designed for close-approach work, was flown, on repurposed software and a modest fuel reserve, into a controlled orbit around an inactive rocket body.

About Satellogic

Founded in 2010, Satellogic (NASDAQ: SATL) builds the infrastructure for Persistent Global Intelligence (PGI): continuous, proactive awareness of the places, assets, and activities that matter. The company combines high-cadence satellite collection, best-in-class technology, AI-accelerated workflows, and sovereign-trusted architecture to help customers move from episodic imagery to persistent monitoring programs.

Satellogic serves allied defense and intelligence agencies, civil governments, and commercial markets that need reliable, scalable awareness of change across large portfolios of sites. Customers can begin with discovery, expand into persistent monitoring, and build toward dedicated or sovereign-controlled capacity as their mission requirements grow. Forward-Looking Statements

This press release contains "forward-looking statements" within the meaning of the U.S. federal securities laws. The words "anticipate", "believe", "continue", "could", "estimate", "expect", "intends", "may", "might", "plan", "possible", "potential", "predict", "project", "should", "would" and similar expressions may identify forward-looking statements, but the absence of these words does not mean that a statement is not forward-looking. These forward-looking statements are based on Satellogic's current expectations and beliefs concerning, among other things, our plans, strategies, prospects, both business and financial. Although we believe our plans, intentions and expectations reflected in or suggested by these forward-looking statements are reasonable, we cannot give any assurance that we either will achieve or realize these plans, intentions or expectations. Forward-looking statements are inherently subject to risks, uncertainties and assumptions. Generally, statements that are not historical facts, including statements concerning possible or assumed future actions, business strategies, events or results of operations, are forward-looking statements. Many actual events and circumstances are beyond the control of the Company. Many factors could cause actual future results to differ materially from the forward-looking statements in this press release, including but not limited to: (i) our ability to generate revenue as expected, including due to challenges created by macroeconomic concerns, geopolitical uncertainty (e.g., trade relationships), financial market fluctuations and related factors, (ii) our ability to effectively market and sell our Persistent Global Intelligence ("PGI") services and to convert contracted revenues and our pipeline of potential contracts into actual revenues, (iii) market acceptance of our PGI services and our dependence upon our ability to keep pace with the latest technological advances, including those related to artificial intelligence and machine learning; (iv) risks related to the secured convertible notes, (v) the potential loss of one or more of our largest customers, (vi) the considerable time and expense related to our sales efforts and the length and unpredictability of our sales cycle, (vii) risks and uncertainties associated with defense-related contracts, (viii) risk related to our pricing structure, (ix) our ability to scale production of our satellites as planned, (x) unforeseen risks, challenges and uncertainties related to our expansion into new business lines, (xi) our dependence on third parties, including SpaceX, to transport and launch our satellites into space, (xii) our reliance on third-party vendors and manufacturers to build and provide certain satellite components, products, or services and the inability of these vendors and manufacturers to meet our needs, (xiii) our dependence on ground station and cloud-based computing infrastructure operated by third parties for value-added services, and any errors, disruption, performance problems, or failure in their or our operational infrastructure, (xiv) risk related to certain minimum service requirements in our customer contracts, (xv) our ability to identify suitable acquisition candidates or consummate acquisitions on acceptable terms, or our ability to successfully integrate acquisitions, (xvi) competition for PGI services, (xvii) risks related to changes in tax laws and regulations, including the "One Big Beautiful Bill Act," (xviii) risks related to changes in trade policy and the related impact on macroeconomic conditions, including further expansions of U.S. export controls and tariffs, as well as related retaliatory actions, (xix) challenges with international operations or unexpected changes to the regulatory environment in certain markets, (xx) unknown defects or errors in our products, (xxi) risk related to the capital-intensive nature of our business and our ability to raise adequate capital to finance our business strategies, (xxii) uncertainties beyond our control related to the production, launch, commissioning, and/or operation of our satellites and related ground systems, software and analytic technologies, (xxiii) the failure of the market for PGI services to achieve the growth potential we expect, (xxiv) risks related to our satellites and related equipment becoming impaired; (xxv) risks related to the failure of our satellites to operate as intended, (xxvi) production and launch delays, launch failures, and damage or destruction to our satellites during launch, and (xxvii) the impact of natural disasters, unusual or prolonged unfavorable weather conditions, epidemic outbreaks, terrorist acts and geopolitical events (including the ongoing conflicts between the United States and Iran, Russia and Ukraine, and in the Gaza Strip) on our business and satellite launch schedules. The foregoing list of factors is not exhaustive. You should carefully consider the foregoing factors and the other risks and uncertainties described in the "Risk Factors" section of Satellogic's Annual Report on Form 10-K and other documents filed or to be filed by Satellogic from time to time with the Securities and Exchange Commission. These filings identify and address other important risks and uncertainties that could cause actual events and results to differ materially from those contained in the forward-looking statements. Forward-looking statements speak only as of the date they are made. Readers are cautioned not to put undue reliance on forward-looking statements, and Satellogic assumes no obligation and does not intend to update or revise these forward-looking statements, whether as a result of new information, future events, or otherwise. Satellogic can give no assurance that it will achieve its expectations.
